Company Description

The USS-POSCO Industries (UPI) steel finishing plant is owned and operated by USS-POSCO Industries (UPI), a joint venture company established by U.S. Steel Corporation and POSCO, of the Republic of Korea.

UPI is a flat-rolled steel fininshing facility that converts hot bands to cold rolled and galvanized sheet, and tinplate product. Production processes include pickling, cold rolling, cleaning, annealing, hot-dip galvanizing, temper rolling, side-trimming, and electrolytic tin and Cr/CrO coating. Hot bands are received by ship or rail, and finished product is shipped by truck or rail.

Contents of the EMP

12-13-403

The owner of operator of the foundry or forge subject to Section 12-13-401 shall prepare a complete and accurate EMP that details the management practices, measures, equipment and procedures that are employed or scheduled to be implemented to minimize fugitive emissions of particulate matter and odorous substances for the operations subject to the EMP.

A. *Operations Subject to EMP and Schedule of Operations*

B. *Description of Operations* - Facilities with operations under 12-13-402 must list and provide description of all process equipment, material usages, abatement and control equipment and monitoring parameters to reduce fugitive emissions of particulates and odors. Please provide information for all the following operations that apply.

C. *Management Practices to Reduce Fugitive Emissions*- Facilities with operations under 12-13-402 must list and provide descriptions of all preventative maintenance activities, pollution prevention and source reduction measures to reduce fugitive emissions of particulates and odors. Provide schedules of activities conducted.

D. *Description of Abatement and Control Equipment*- Facilities must provide a comprehensive list of all abatement and control equipment for operations subject to 12-13-402 and name the source(s) of operation in which it abates.

A. Operations Subject to EMP and Schedule of Operations

The EMP shall address all of the following operations that are conducted at a foundry or forge per 12-13-402.

Please check all facility operations that apply and provide the schedule of operation.

Operation		Schedule of Operations
☐ 402.1	Mold and Core Making Operations	
☒ 402.2	Metal Management	Up to 24 hours a day, seven days a week. Permitted to run 8640 hours per year per production line.
☐ 402.3	Furnace Operations, including tapping and pouring	
☒ 402.4	Forging Operations	Up to 24 hours a day, seven days a week. Permitted to run 8640 hours per year per production line.
☐ 402.5	Casting and Cooling Operation	
☐ 402.6	Shake Out Operations	
☐ 402.7	Finishing Operations	
☐ 402.8	Sand Reclamation	
☐ 402.9	Dross and Slag Management

B. Description of Operations - Metal Management

Describe the facility's metal inspection program, work practice standards and material acquisition plan/procedures upon receipt of scrap or unprocessed metal. Include any pollution prevention management practices and source reduction measures to ensure the metal received is clean.

All coils are brought in by rail or ship and stored in the coil staging area by the dock. Each coil is an ASTM verified grade that has specific chemical composition requirements. They are not segragated, but are identifiable by barcodes. Each coil is equipped with an individula barcode that will follow the coil throughout the entire production process. The barcode identifies the coil including the initial ASTM grade, what process it has been ran through at what time and to what specifications, and what the final product intended is.

C. Management Practices to Reduce Fugitive Emissions– Metal Management

Describe control measures to minimize fugitive emissions from scrap or unprocessed metal.

Because the steel is in large coils, the only fugitive emissions from the coil are from the iron oxide that forms on the outside of the coil before it is processed. These emissions are captured by a baghouse (A26) at the beginning of the processing line at the Pickling Line Tandem Cold Mill (PLTCM). Any other coatings added to the coils are removed at the beginning of each process line in the cleaning section. All scrap is in large pieces with no fugitive emissions. It is stored in bins and shipped out by truck and rail.

A. *Process Flow Diagram* – Facilities must indicate all operations in Section 12-13-402, the flow of materials used and identify all monitoring of processes, abatement and controls to minimize emissions beginning from material receipt to achievement of final product. Identify all abatement and control devices by District source numbers according to District Permit or as exempt from District Permit.

B. *Facility Layout / Floor Plan* - Facilities must indicate all relative locations of processing equipment and monitoring and controls, all permitted and exempt sources identified in the process flow diagram per Section 12-13-403.1.1 and any other source(s) that may contribute to particulates and odors. Include all building walls, partitions, doors, windows, vents and openings and indicate all areas that have abatement for particulates and odors. Identify all metal melting and processing equipment by District source numbers according to District Permit or as exempt from District Permit.

1	4/1/15	Pave all areas used to store or transport scrap metal to and from operations.	☐ Yes ☒ No	Due to the nature of our operations, it would not be economically feasible to pave all areas that are used to store or transport scrap metal. Furthermore, the scrap metal that is being stored and transported in non-paved areas is not emitting or contributing to any air emissions.			☒ Yes ☐ No
2	4/1/15	Consider including the pickling line as a source of fugitive emissions of odors and identify any measures or controls to minimize emissions.	☐ Yes ☒ No	The pickling line is a closed operation except for where the strip being processed enters and exits the process. It is not an odorous process. Whenever in operation, it is vented to a packed bed scrubber that utilizes a caustic solution to minimize any emissions.			☒ Yes ☐ No
3	4/1/15	Install bag break detectors and audible alarms at baghouses.	☐ Yes ☒ No	All baghouses are permitted under our Title V permit. They are visually inspected monthly to ensure they are in correct operating order.			☒ Yes ☐ No
