## **Air District's Clean HEET Program now accepting applications**

*Incentives available for all Bay Area homeowners to replace wood-burning devices with electric heat pumps*

**SAN FRANCISCO** – The Bay Area Air District's Clean HEET Program is now accepting applications for grants that can help to offset the cost of switching from wood-burning or pellet-burning stoves, fireplace inserts or open-hearth fireplaces to an electric heat pump. A decommission-only option is also available for homeowners to remove existing open-hearth fireplaces or older, uncertified wood-burning stoves or inserts. Switching to an electric heat pump helps improve air quality in communities by replacing polluting wood-burning devices with cleaner heating options.

"Wood smoke is one of the largest sources of fine particulate pollution in our region, and it has real impacts on the health of Bay Area residents," said Dr. Philip Fine, executive officer of the Air District. "This program helps homeowners replace or remove older, polluting wood-burning devices, significantly reduces harmful emissions and delivers improved air quality in Bay Area neighborhoods that need it most."

Funding is available for the Clean HEET Program on a first come, first served basis. Individual awards range from \$1,000 to \$10,500 to replace or remove existing wood-burning heating devices. All Bay Area homeowners are eligible to apply. **The program does not provide reimbursement for work already performed.**

**The deadline to apply is 5 p.m. PDT on July 14, 2026.**

Heat pumps offer a clean and energy-efficient alternative to wood devices. Similar to a refrigerator, heat pumps use electricity to transfer heat from outside air to heat a home. Most heat pumps can also cool a house by operating in reverse, removing heat from indoors.

The Clean HEET Program is funded by the U.S. Environmental Protection Agency's Targeted Airshed Grant Program, or TAG, which provides grants to improve air quality across the nation

with emphasis on reducing PM<sub>2.5</sub>, or fine particulate matter, ambient air concentrations, with match funding by the Air District.
